03-09-2023 Biology Test

Name: Saanvi Agarwal
Allen Batch No: B1ON1RD
Class 10 [Phase I]

1) (4) Both (1) and (2)

2) (2) Mitochondria only

3) (2) WBC

4) (2) Transpiration

5) (4) 1 and 2

6) (4) None of these

7)

Respiration in Plants	Respiration in Animals
→ occurs only at night	→ occurs at any time
→ They respire through stomata	→ They have different organs in their body
→ Chlorophyll is required	→ Chlorophyll is not required

8)

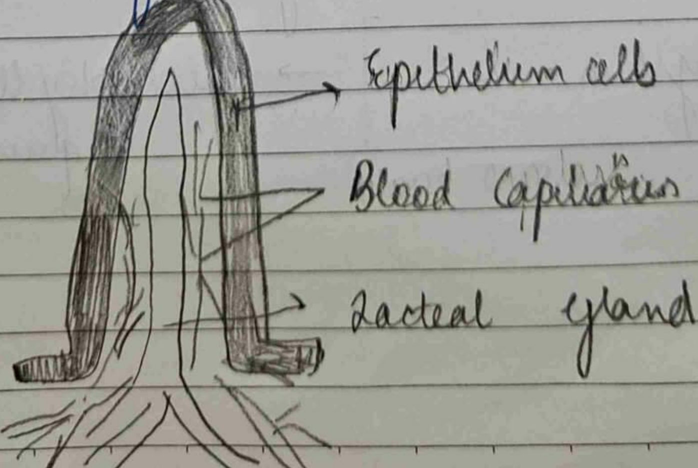
Light Reaction	Dark Reaction
→ ~~splitting~~ conversion of light energy into chemical energy and splitting of water into Hydrogen and Oxygen	→ Reduction of CO_2 into carbohydrates
→ No sugar is formed	→ Sugar is formed
→ O_2 is released	→ No O_2 is released

9 (a) Pepsin, Trypsin ~~are en~~ ~~and g~~ are enzymes that act on proteins

(b) Pyruvate $\xrightarrow{\text{~~back~~. absense of } O_2}$ Ethanol + CO_2 + 2ATP

10) (a) Acid in the stomach kills all the harmful germs and bacteria
It creates an acidic medium for pepsinogen to function and convert into pepsin

(b) Lacteals ~~(part of Villi)~~ absorb lipids and fats large moleules from small intestine



Date :

11 (a) The alveoli of lungs are covered with blood capillaries ~~because~~ so as ~~to absorb~~ that exchange of gases can take place smoothly. It also provides a large absorptive surface area so that O_2 can be absorbed and transported to various cells in the body.

(b) The walls of trachea is supported by rings of cartilage so as to prevent air from collapsing

12 (a) During winter, we sweat less [And sweating is also a way to remove wastes from the body] So due to loss of sweating the excess fluid is excreted in the form of urea. Thus, we have more urine produced in winter.

(b) ~~Kid~~ Skin, lungs and liver are accessory excretory organs

(c) ~~1) Nephridia~~ 1) Malpigian Tubes
~~2) Coxal glands~~ 2) Coxal glands
~~3) Malpigian tubes~~ 3) Nephridia
are excretory organs in Anthropoda

13) (i) 4 → Left Atrium
5 → Right Atrium

(ii) 3 and 6 are superior vena Cava and inferior Vena Cava respectively. Superior Vena Cava collects all the deoxygenated blood from the top of the body (head, etc) Inferior Vena Cava on the other hand collect all the deoxygenated blood from lower part of body (legs, etc)

(iii) Arteries are blood vessels which carry blood away from heart

(iv) We can say that circulation in human beings is a double circulation because blood passes the heart twice.
Once when deoxygenated blood enters the ~~L~~ right atrium and ~~from~~ right ventricle it is sent to lungs through Pulmonary Artery.

Whereas 2nd one that time when ~~from~~ lungs through Pulmonary Vein send Oxygenated Blood back to left atrium.
