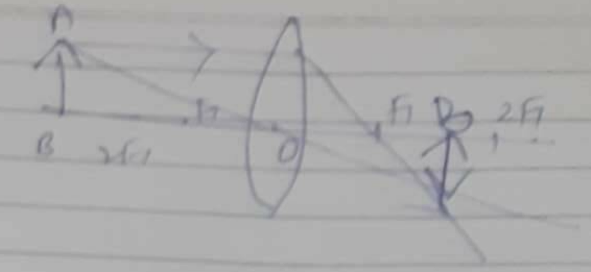
(ii)



Chemistry :-

Que :- 1 (3) BS – Reductant , H_2O_2 – Oxidant.

Que :- 2 (1) $CaCO_3$, $Ca(OH)_2$

Que :- 3 (4) NaCl, O_2 Ans

Que :- 4 $CaCO_3$, CO_2 , $\overline{NaHCO_3}$

Que :- 5 Pb_3O_4 + ~~4~~HCl ⟶ $3PbCl_2$ + $2H_2O$ + Cl_2

$Pb_3O_4 + \underline{8HCl} \longrightarrow 3PbCl_2 + \cancel{4}H_2O + Cl_2$

$\boxed{8+4+3+1}$

Ans 17 [Option ⇒ 2]

Que :- 6 (1) NaOH , CO_2

Que :- 7 (1) B > A > C - decreasing acidic strength.

Que :- 8 (3) (A) and (R) are true but (R) is not correct explan – of (A)

Que :- 9

All alkalis are bases but all bases are not alkalis. The bases which are soluble in water is called alkali This is the Difference between base and alkalis.

Que :- 10 $MnO_2 + 4HCl \longrightarrow MnCl_2 + 2H_2O + Cl_2$

oxidized ⇒ HCl | oxidi – agent ⇒ MnO_2

reduce ⇒ MnO_2 | reducing agent ⇒ HCl.

Ans :- 11

(i) $BaCl_2 + Na_2SO_4 \Rightarrow BaSO_4 + 2NaCl$ [ppt]

(ii) Double Displacement Reaction.

(iii) colour of Barium sulphate :⇒ White.

Ans :- 12 X ⇒ Caclium — Carbonate.
Y ⇒ Calcium hydroxide
G ⇒ Chlorine Gas -
Z ⇒ Bleaching powder.

Ans :- 13

(i) The colour of solution will change.

(ii)

$AgNO_3 + NaCl \rightarrow AgCl + NaNO_3$ [white in colour]

(iii) ~~$HCl + [Na_2SO_4 + BaCl]$~~

~~$NaCl + BaSO_4$~~

When Hydrochloric acid is added to Barium sulphide then It get decompose and Barium sulphide solution becau - solube that's why no ppt is formed.
