

(i) (2)

(ii) (3)

(iii) (2)

(iv) (2)

(v) (1)

(vi) (2)

(vii) (2)

Q3. When small intestine released intestinal enzyme the protein get convert into ~~amino acid~~ and ~~glucose~~ carbohydrate in glucose.

Q4. The aerobic respiration takes place in the presence of oxygen and in aerobic respiration glucose completely break down into H_2O , CO_2 and $32ATP$. and anaerobic respiration takes place in the absence of oxygen and it produce very less amount of energy,

2. Absorption of sunlight by a chlorophyll.

3. Conversion of light energy into chemical energy and splitting of water into hydrogen and oxygen.

4. Reducing of CO_2 by hydrogen and form Carbohydrate.

22. Arteries

1. Arteries carry oxygenated blood except pulmonary artery.

2. Arteries don't have valves.

3. Arteries have thick muscular wall.

Veins

1. Veins carry always deoxygenated blood except pulmonary vein.

2. Veins have valves which prevent the back flow of blood.

3. Veins have thin muscular wall.

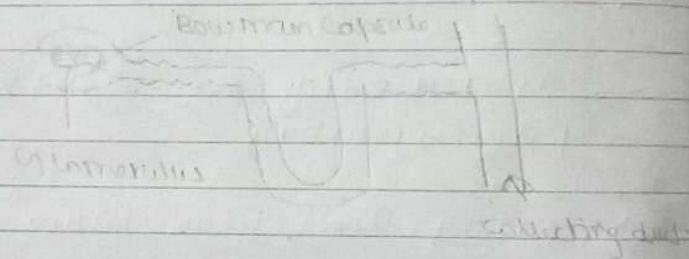

(13) (i) salivary amylase

(ii) HCl, mucus and two inactive enzyme pepsinogen and prorenin.

(iii) Small intestine

(iv) finger like projection present in small intestine which absorb the digested food.

14.

(b) reflex action is quick involuntary action in response to internal and external stimulus in which brain ~~is~~ not involve. In reflex action ~~sensory~~ sensory impulse ~~take~~ take less time to reach brain and motor impulses take less time to reach the effector.

Q10. because due to double circulation oxygenated or ~~deoxygenated~~ deoxygenated blood is separated and so mixing oxygenated or deoxygenated blood human being not tolerate.
