- 4 (3)

Rabbit and deer

1. deoxygenated blood found in right atrium and right ventricle is carried by the Vena cava and oxygenated blood is found in left atrium and ~~right~~ left ventricle.

10 pure tall and pure dwarf in which pure tall is dominant and pure dwarf is recessive

* Yellow and green seed in which Yellow is dominant.

* Round and wrinkle in which Round is dominant.

11. the number of chromosome in female is 24 chromosome and the number of chromosome in the zygote is 24 ($12+12$).

(B) ($22+n$), ($22+n$) (ii) ($22+n$), ($22+y$)

12.

12. pancreas

(ii) it cause the goitre disease in human place because iodine maintain the thyroid gland.

13.

(i) pea plant have 7 contrasting pair of trait.

(ii) pea plant grow all time in the year.

(iii) its life cycle is short.

(iv) those trait which appear in F_1 generation called dominant and those don't appear in F_1 generation called recessive.

dominant is represent by capital letter.
recessive is represent by small letter.

is dominant.

It is 2:1 chance
of Zygote is

(11, 22+9)

because

(ii) When it cross between two contrasting characters like yellow and round seed and green wrinkled seed only yellow and round seed is appear in F_1 generation.

* If when it cross between pure dominant and pure tall only pure tall is appears in F_1 generation.

19. Ovary : It release female sex cell called 'ova' and also hormone progesterone and oestrogen.

Oviduct : Fertilization takes place in the oviduct.

(b) growth and development of zygote take place and menstruation gets stop.

(c) If no fertilisation takes place the thick wall along with blood vessel gets break down in the form of vaginal bleeding.

(c) Placenta is produced by progesterone hormone.

* It is a disc like structure which provide oxygen to the foetus.

* ~~remove~~ it provide nutrition to the embryo.
