

[Biology]

1. (2) salivary amylase
2. (3) Nostrils
3. (2) Veins
4. (3) both (1) and (2)
5. (1) Gills
6. (3) Capsule
7. (1) lymph

Ques 8

Ans = ✓

The final products are sugar and amino acids respectively.

Ques 9.

Ans = ✓

In aerobic respiration glucose is break down ~~in to~~ in presence of oxygen and liberate 38 ATP whereas in anaerobic respiration glucose is break down without presence of oxygen to get 2 ATP.

Ques 10

Ans = ✓

double circulation is necessary in human being as it keeps the oxygenated and deoxygenated blood ~~sp~~ separate to perform ~~pr~~ work efficiently.

Q11

Ans = ✓

The three main events occur during photosynthesis are :-

- i) Absorption of light through the chlorophyll.
- ii) Converting light energy in chemical energy and ~~splitting~~ CO_2 H_2O in ~~Carbon~~ ^{Hydrogen} and oxygen.
- iii) ~~Carbon~~ ^{Carbon dioxide} is reduced to make carbohydrates.

Que 12

Sol $\Rightarrow$

Arteries

Veins

- | | |
|--|--|
| <ul style="list-style-type: none"> i) It takes blood away from heart towards other organs ii) It circulates oxygenated blood except pulmonary veins iii) It Blood flows with high pressure | <ul style="list-style-type: none"> i) It takes blood towards heart from the other organs. ii) It ex transports deoxygenated blood except pulmonary vein. iii) Blood flows without much pressure. |
|--|--|

Que 13

i)

$\rightarrow$

Salivary amylase is present in our mouth.

ii)

$\rightarrow$

(iii)

→

Small intestine is the longest part of our alimentary canal in our body.

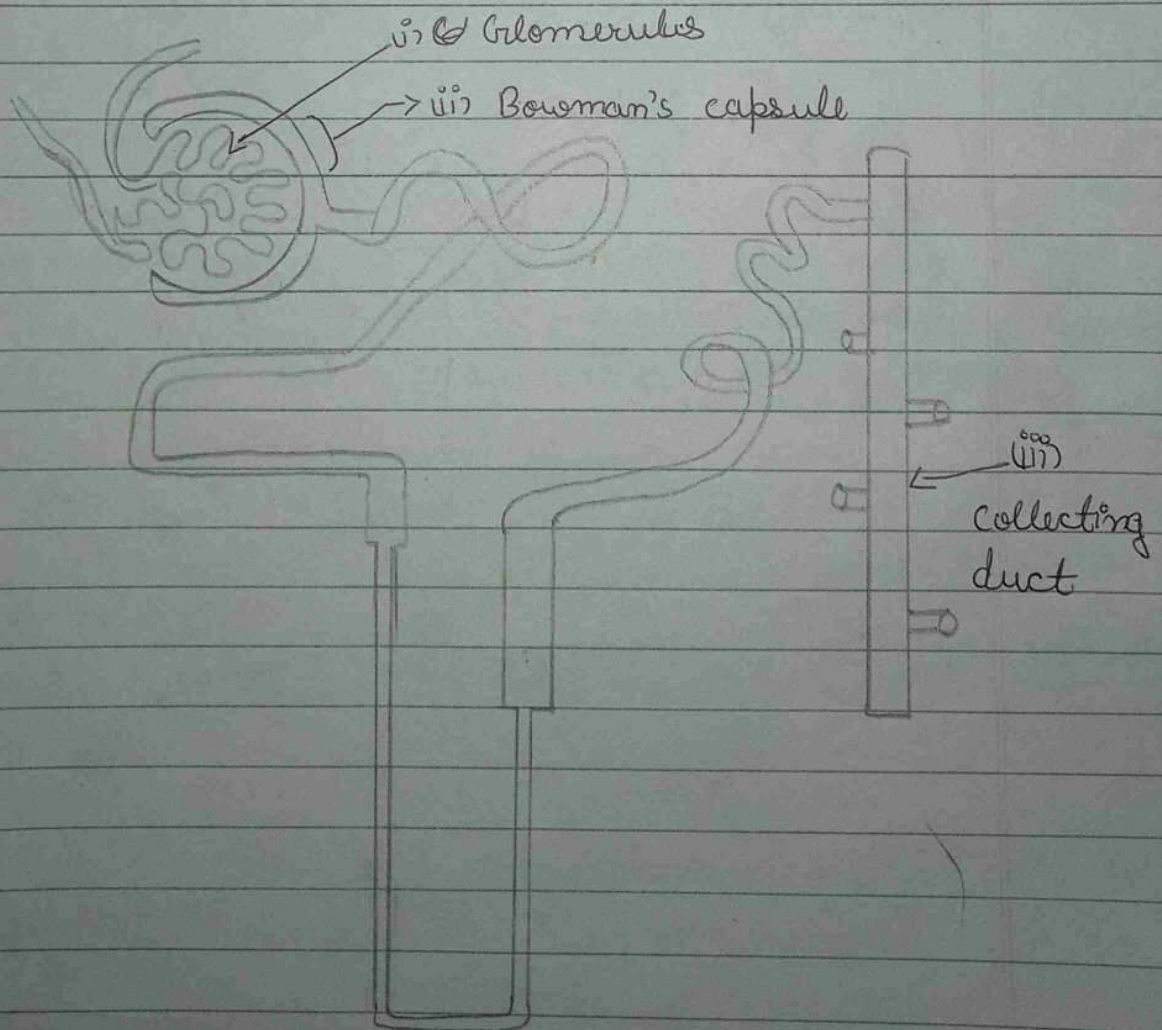

(iv)

→

Villi are small finger like structure which are present in our small intestine. ~~also~~ Villi are responsible for absorption of minerals and other substances.

Que 14.

(a)

(b)

Ans = ✓

Reflex action is controlled by spinal cord. It is an involuntary action which happens in a fraction of time. Reflex action protects us from external harm and provides better control and coordination.
