

BIOLOGY

1. passes neither through our liver nor pancreas
2. living being consume oxygen during respiration
3. bud develops due to reproductive cell division
4. Pisces and amphibians
- 5) Test tube B as pepsin can

breakdown protein in acidic condition

Both A and R are true but R is not correct explanation

A is true R is false.

. rabbit and deer belong to same trophic level.

In left chamber of heart -

oxygenated blood is found

In right chamber of heart
deoxygenated blood is found.

+ + + =

10. a) yellow seed $\rightarrow$ dominant
wrinkling-green seed $\rightarrow$ recessive

(b) Round seed $\rightarrow$ dominant
wrinkling $\rightarrow$ wrinkled seed $\rightarrow$ recessive

11. ~~Female~~ female gamete have 24 chromosomes
No. of chromosomes in an zygote
will be 48.

(b) female child $\rightarrow XX$
male chromosome $\times Y$

$$\boxed{} + \boxed{} + \boxed{} + \boxed{} = \boxed{}$$

12 a) Pancreas ~~is~~ is a gland that secretes enzymes as well as hormone

(b) . Iodine is needed for proper development of and functioning of thyroid gland. In case of low Iodine, thyroid gland swells up.

13 (a) Mendel selected pea plant for experiment

as (i) it had short life cycle. ~~short~~ so many generations could be studied (ii) it ~~gave~~ ~~by~~ ~~many~~ produces many offsprings

low tending, thyroidea gland swelling up.

(a) Mendel selected pea plant for experiment

as (i) it had short life cycle. ~~short~~ so many generations could be studied
(ii) it ~~gave~~ ~~but~~ ~~many~~ produces many offsprings.

(b) dominant trait -

the characteristics which are able to express itself in presence of other traits

recessive trait

the characteristics which are unable to express itself in presence of other traits.

+ + + =

Q13 (iii)

two visible traits of garden pea.

position of flower — axial/terminal
colour of seed — yellow/green
height of plant — tallness/
dwarfness

+ + + =

Answer (a) Ovary -
 produces ovule.

oviduct -

carries ovule to uterus and
 fertilization takes place in oviduct

b) if it has to receive a zygote then
 uterus lining thickens and
 blood is received

(ii) if no fertilization occurs
 then inner lining of uterus
~~detach~~ breaks down accompanied
 by loss of blood.

(c) placenta is a tissue
 connected with ~~between~~ fetus and
 womb
 Placenta ~~to~~ absorb nutrients
 and provide it to fetus

Q13 (f)
 tw
 pen
 possi
 col
 he

b) if it has to receive a zygote then
uterus lining thickens and
blood is recused

(ii) if no fertilization occurs
then inner lining of uterus
~~detach~~ breaks down accompanied
by loss of blood.

(c) placenta is a tissue
connected with ~~both~~ foetus and
womb

Placenta ~~can~~ absorb nutrients
from and provide it to foetus
