Q14 → (4) It passes neither through our liver nor pancreas.

Q24 → (3) Burning of candle decreases the life span of cockroach.

Q34 → (2) Bud develops due to repetitive cell division at a specific site.

Q44 → (4) Pisces.

Q54 → (2) Test tube B as HCl will breakdown protein into simple molecules.

Q64 → Both A & R are true & R is correct explanation of A. (1)

Q 7) → Both A & R are true but R is not a correct explanation of A

Q 8) → Rabbit & Deer

Q 9) → The left atrium receives oxygenated blood from the lungs. The right atrium receives deoxygenated blood returning from other parts of the body.

Q 10) → The pair of contrasting traits are: -

a) Yellow seed = Dominant
Green seed = Recessive

by Round seed = Dominant
 wrinkled seed = Recessive.

Q11/12
 a)

→ There are 24 chromosomes in the male gamete of a tobacco plant. Therefore, the number of chromosomes in the zygote is 48 as it is formed after Fertilization, that is Fusion of both male & female gametes.

b)

→ To determine female the chromosomes are XX

& To determine male the chromosomes are XY

Q12
ii

→ The pancreas secretes digestive enzymes as well as hormones.

ii

→ lack of iodine in the diet can hamper general metabolism which can lead to many complications.

Q13
ii

→ Because they grow quickly, are easy to breed, & have a variety of traits.

ii

→ Dominant traits:-

The First that appears or expressed visibly in the organism.

Recessive traits:-

Present at gene level but does not show itself in the organism.

iii)

Seed shape: Round or wrinkled

Pod shape: Constricted or inflated

iv)

Ovary:-

i) Ovary stores the produced eggs in it & later releases an egg during ovulation.

ii) Ovary acts as an endocrine gland & produces hormones that control the menstrual cycle & pregnancy.
