

ii) They bring deoxygenated blood from the rest of the body to the heart.

(iii) Arteries.

(iv) This is because the blood in our body flows twice through the heart in one cycle.

10. a) ① Kills bacteria and pathogens.
 ② Acts as an acidic medium to activate pepsin.

(b)

→ Lacteal absorbs fatty acid and glycerol.

11. a) The capillaries help in transfer of O_2 and CO_2 b/w the in the blood.

- b) This prevents the collapse of trachea of when there is no air in it.

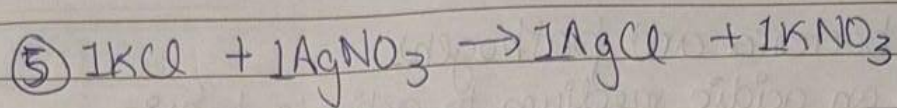

12. a) More urine is produced because of the low temperature there is no loss of water through sweating therefore excess water is eliminated through urine.

- b) Skin, lungs and liver.

- c) Green glands and malpighian tubes

13. i) 4 → Left atrium

- 5 → Right Atrium.

Biology

① ATP and NADPH

② Mitochondria.

③ RBC

④ Transpiration.

⑤ Glomerulus and Bowman's capsule

⑥ ?

⑦ Plants don't ~~be~~ breathe, Animals breathe.

→ Plants use CO_2 after respiration for photosynthesis, Animals release CO_2 out of the body.

⑧ → Light reaction requires light, Dark reaction can occur in the absence of light.

→ O_2 is produced in light reaction, No O_2 is produced in dark reaction.

⑨ a) Trypsin & Pepsin.

b) Pyruvate gets converted into lactic acid stored in muscles of animals.
