Q1. The insoluble substance is Barium ~~chloride~~ ^{Sulphate} ~~chloride~~ BaSO_4 .

It is white in colour.

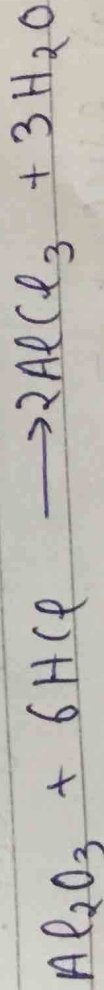

Q2. Ammonia gas.

Q3. Both A and R are correct and A is correct explanation of R.

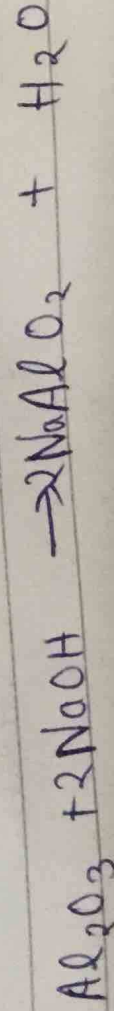

~~Q4.~~ A is true but R is false.

Q5. Amphoteric oxides are those ^{metal} oxides which react with both acid and base to give salt and water. They show both acidic and basic behaviour.

Ex: Al_2O_3 ~~is~~ is Amphoteric oxide.

It reacts with Acids to give salt and water.

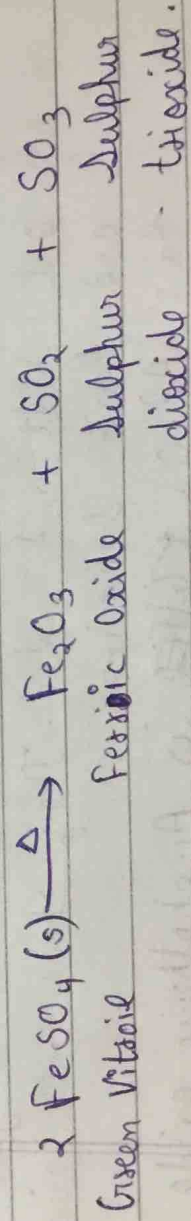

It reacts with bases to give salt and water.

Q6. The student would observe displacement reactions only when clean strips of Aluminium, Zinc are placed in the beaker containing FeSO_4 solution because Aluminium and Zinc are more reactive than iron (Fe) and will displace it.

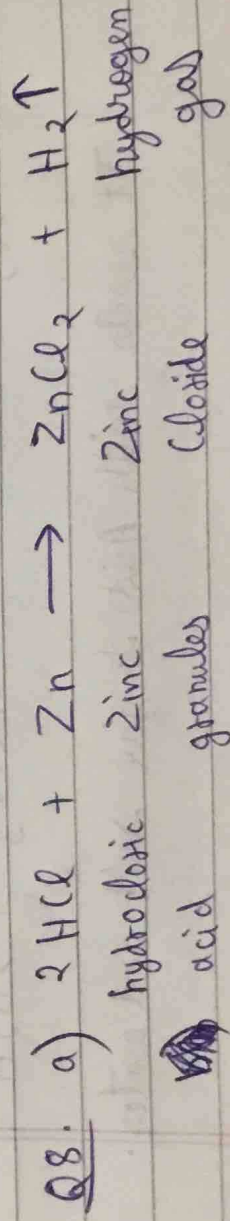

Copper is less reactive than iron and Iron is equal to iron hence displacement reaction would not take place.

Q7. Green Vitroil is FeSO_4 .

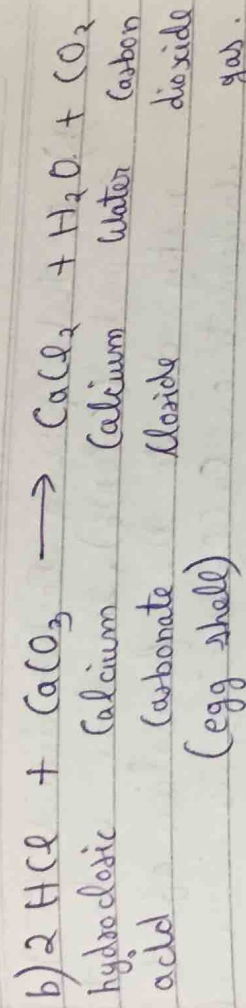

So, reaction is:

The solid's colour is black-brown.

2 H

Q9. The salt is NaCl or common salt, sodium chloride. It can be prepared by the reaction:

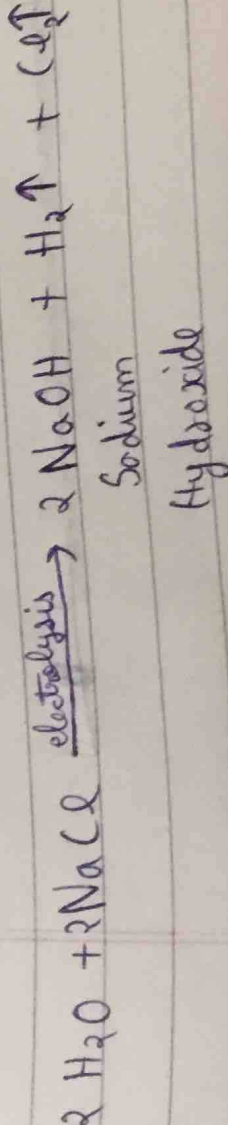

2 Uses are as:

① It is used in daily life for enhancing flavour of food as common salt.

② It is used in preparation of many other chemical substances like NaOH, NaHCO₃ etc.

Q10. a) This process is called chlor-alkali process in which NaCl (aqueous) undergoes electrolysis.

b) On first, passing Carbon dioxide (CO_2) through lime water (Ca(OH)_2), the lime water turns milky due to the formation of Calcium Carbonate or CaCO_3 which is insoluble in water. The reaction is as follows:

But if we keep passing the Carbon dioxide through the solution then the solution turns back to colourless because of the formation of Calcium bicarbonate which is soluble in water. The reaction is as follows:

Q11: A - $\text{Pb(NO}_3)_2$ or Lead Nitrate

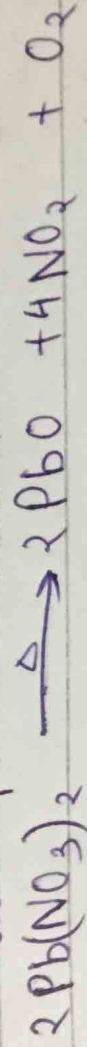

B - NO_2 or Nitrogen dioxide

C - O_2 or Oxygen.

D - PbI_2 or Lead Iodide

The reaction between A and B is

The reaction of heating of $A(Pb(NO_3)_2)$ is a decomposition reaction.

The reaction between Aqueous solution of A and Potassium Iodide is a double displacement reaction.
