

Chemistry

(1) Graphite

(2) (i) Malleability $\Rightarrow$ The property of metal by which they can be beaten into thin sheets.

(ii) Ductility $\Rightarrow$ The property of metal by which they can be drawn into wires.

(3) Metals

Non-Metals

(1) Metals are generally hard except sodium

(1) Non-Metals are generally soft except diamond.

(2) They are Malleable and ductile in nature

(2) They are brittle in nature and can be broken down.

(3) They are shiny and lustrous.

(3) They are neither shiny nor lustrous except iodine.

(4) Good conductor of heat and electricity except sodium

(4) Bad conductor of heat and electricity except Graphite.
