Chemistry

The insoluble substance is
Barium Sulphate - BaSO_4
Colour = white

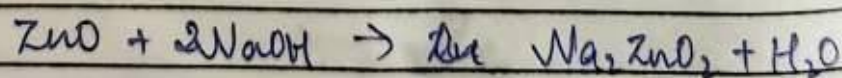

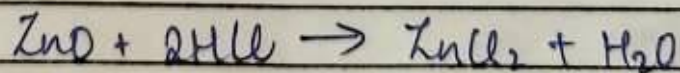

2) The gas produced when the given reaction takes place is ammonia gas.
 $(\text{NH}_3)(g)$

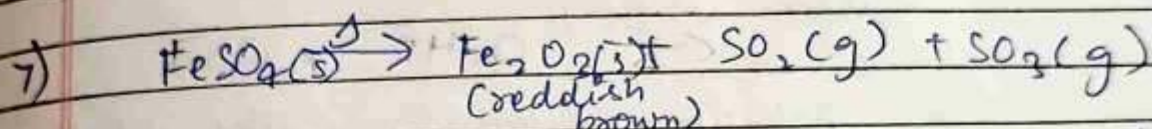

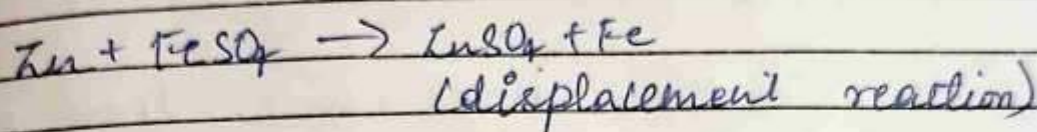

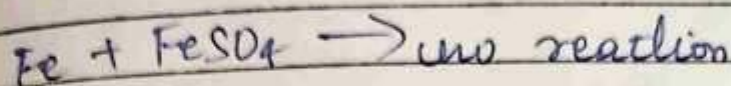

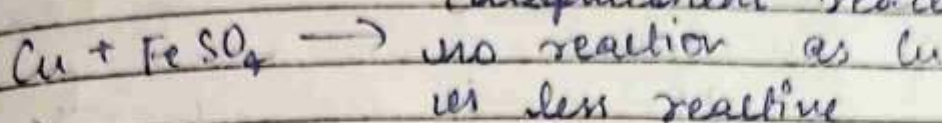

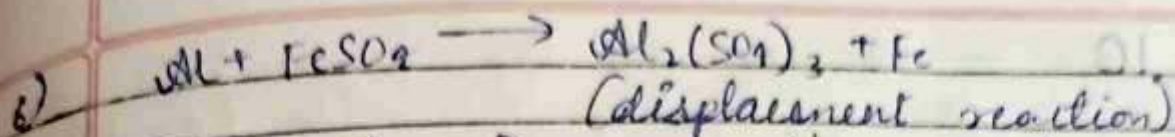

Both (A) and (R) are true and
R is correct explanation of A

4) (A) is true but R is false.

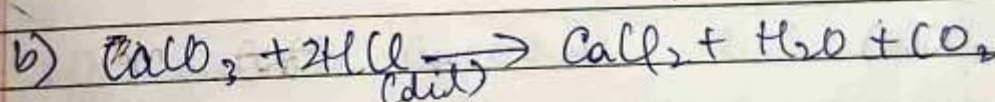

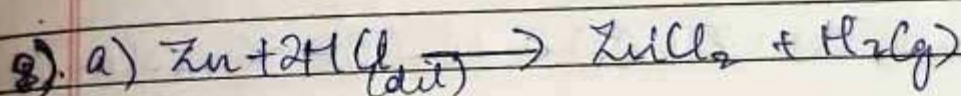

5) Amphoteric oxides are the oxides which react both with acids and bases and possess the properties of both.

Zn	1	1
Na	2	2
O	3	3
H	2	2

The colour of the product formed (Fe_2O_3) is reddish brown.

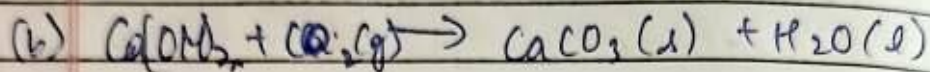

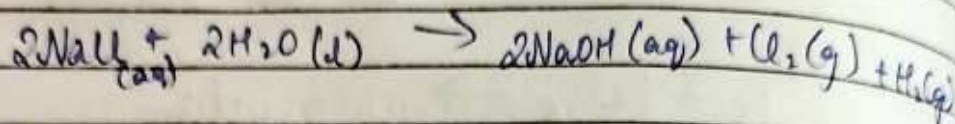

8a) When dil. Hydrochloric acid reacts with zinc, it forms Zinc chloride and Hydrogen gas.

8b) When $CaCO_3$ (crushed egg shells) react with dil. HCl, it forms Calcium chloride, water and Carbon dioxide.

P.T.O.

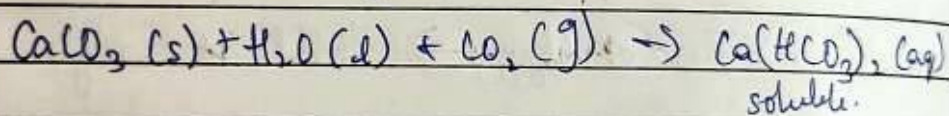

9 after 10

10(a) The process for the preparation of Sodium Hydroxide (NaOH) is called chlor-alkali process.

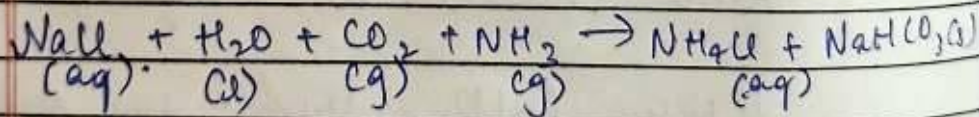

In the above case, lime water turns milky.

On passing excess CO_2 , the solution becomes clear as conversion of CaCO_3 ppt into soluble hydrogen carbonate takes place.

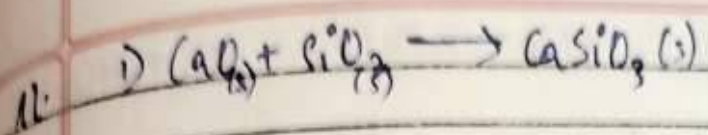

9. The salt used in making the Pakoras is Baking soda or NaHCO_3 .

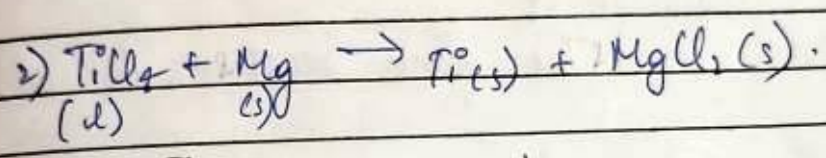

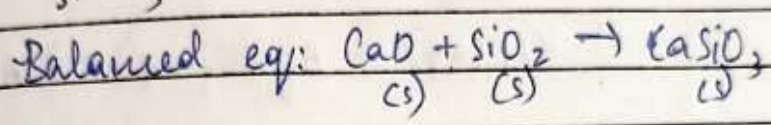

Uses:

- It is an ingredient in antacids
- Used in soda-acid fire extinguishers

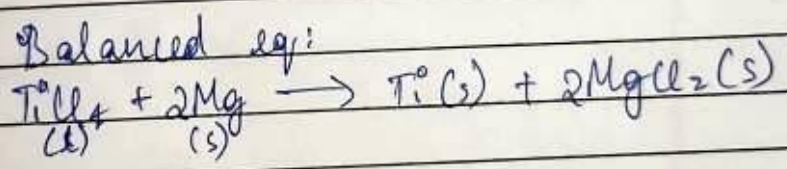

The given reaction is a combination reaction.

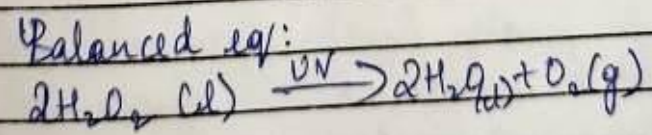

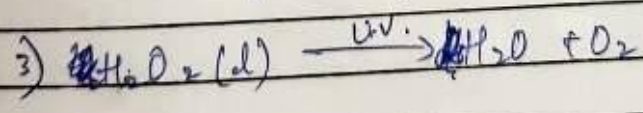

Ca	1	1
O	1	1
Si	3	3

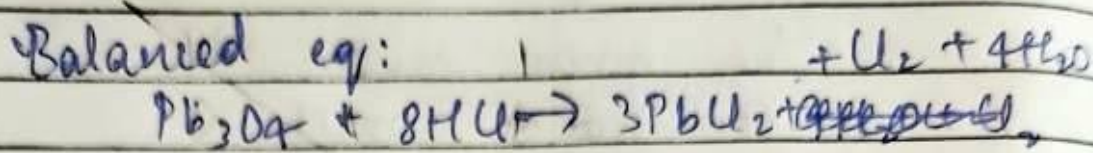

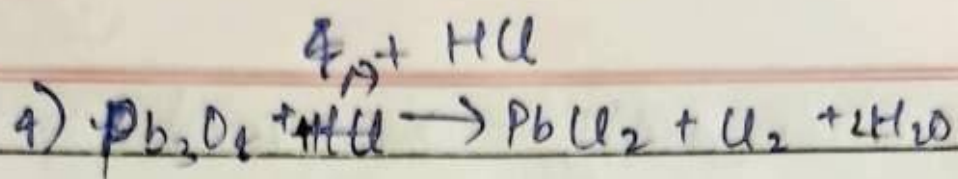

Ti	1	1
Cl	4	4
Mg	2	2

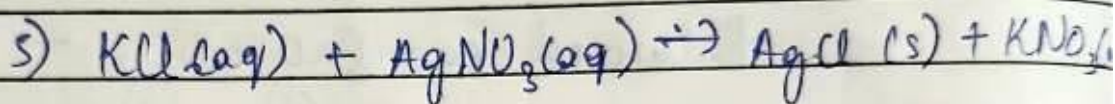

The given reaction is a single displacement reaction.

The given reaction is a decomposition reaction.

The given reaction is a double displacement reaction.

Balanced eq:

The given reaction is already balanced.

The given reaction is a precipitation reaction (double displacement reaction).
