

Solenoid is different from the pattern of magnetic field around a bar magnet.

14. (i) an exothermic reaction

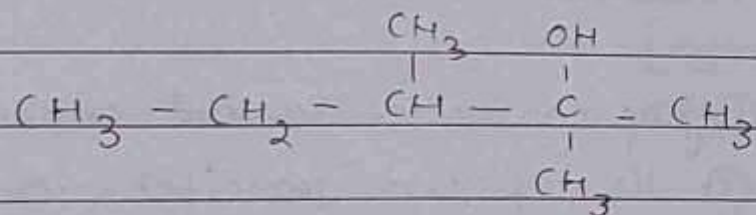

15. (1) CO_2

16. (4) L_1

17. (4) (i) & (iii)

18. (3) i-c, ii-d, iii-b, iv-a

19. (2)

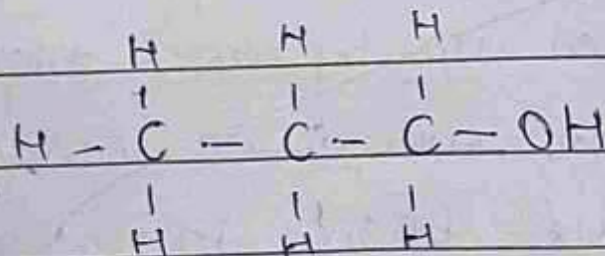

20. (2) 148

25. An alcohol with three carbon atoms would have the following formula - C_3H_7OH

the name would be - Propanol

the structure would be :-

26. (i) Magnesium reacts with ~~only~~ water only on boiling

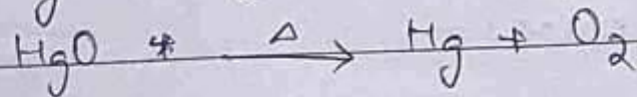

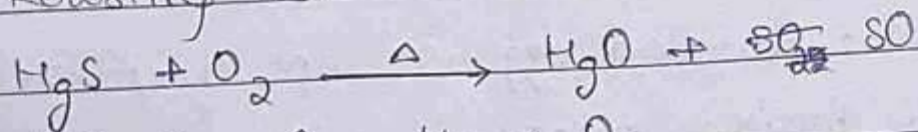

(ii) Copper does not even react with steam.

32. The metal is $\rightarrow$ Mercury (Hg)

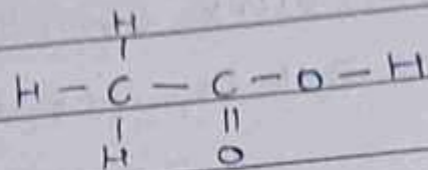

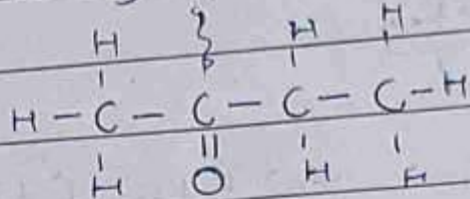

The metal ore is $\rightarrow$ Cinnabar (HgS)

The ore is turned into a metal oxide by two processes of

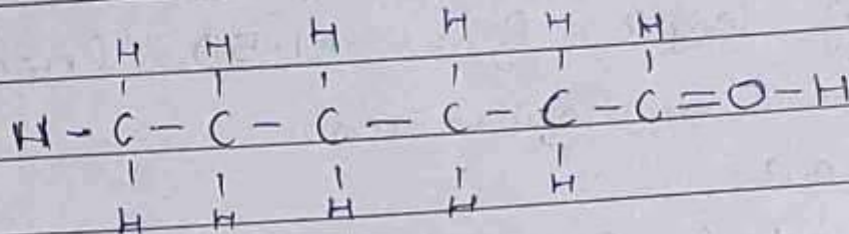

1. Roasting as:-

33.

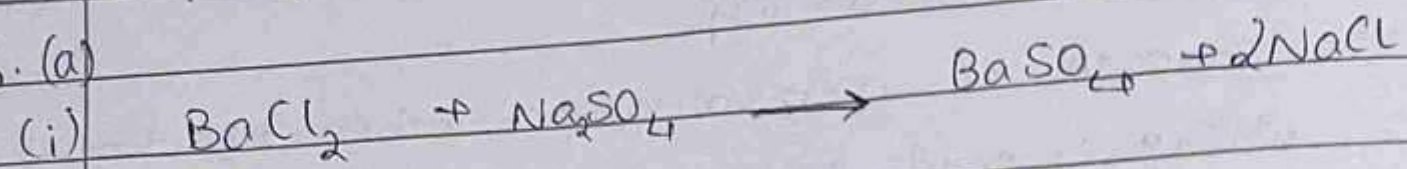

(i) Ethanoic acid $\rightarrow$ CH_3COOH (ii) Butanone $\rightarrow$ ~~$\text{C}_4\text{H}_8\text{C}$~~ ~~$\text{C}_3\text{COH}$~~ 

(iii) Hexanal

36. (a)

(i)

(ii) This is a ~~displacement~~ double displacement reaction.

(iii) The colour of the precipitate formed is white.

(b) ~~iv~~ The substance used for white washing of the walls is Calcium oxide.

Calcium carbonate gives a shiny finish to the walls.

39.

(ii) The gas formed at anode is $\rightarrow$ ~~chlorine~~ (chlorine) Cl_2
 The gas formed at cathode is $\rightarrow$ (hydrogen) H_2

(iv) ~~(iii)~~ ~~Na~~ Baking soda can be prepared by using sodium chloride as as, when

- When sodium chloride along with water, carbon dioxide and ammonia react with each other
 - They form a salt of ammonium chloride and sodium hydrogen carbonate.
 - Sodium hydrogen carbonate is baking soda.
- The following is its equation:-
