CHEMISTRY

Section-A

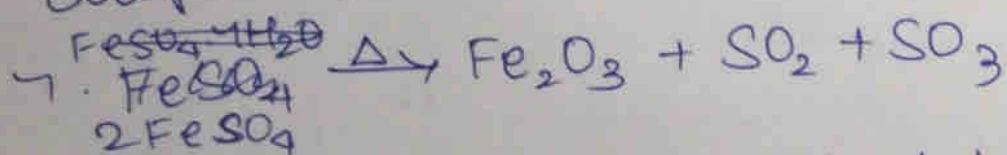

1. (2) White, BaSO_4
2. (1) Ignites with a 'pop' sound.
3. (1) Both the Assertion and the Reason are correct and the reason is the correct explanation of the assertion.
4. (3) Assertion is true but the Reason is false.

Section-B

5. Metallic oxides which show both properties of acids and bases are called amphoteric oxides.
eg- Al_2O_3

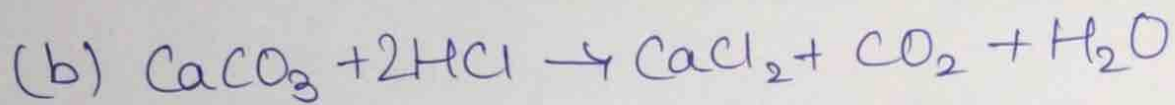

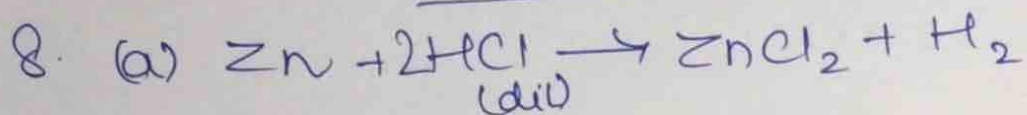

6. In the case of ^{all aluminium, zinc and except} ~~only~~ copper, displacement reaction can be observed since ~~it~~ among the others (aluminium, zinc) ~~& iron~~ ^{lie} ~~only copper~~ above iron in the reactivity series and hence can displace it.

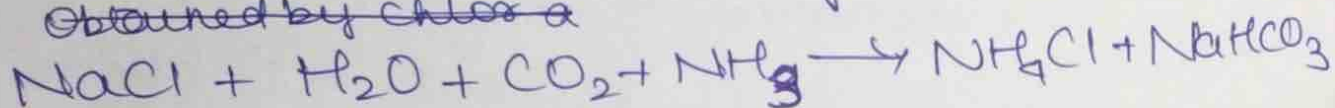

The colour of the solid product formed (Fe_2O_3) is reddish brown.

Section - C

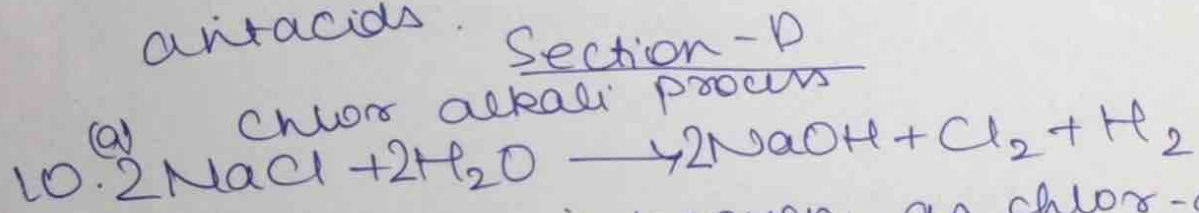

9. The salt is sodium hydrogen carbonate or baking soda.
~~obtained by chlor a~~

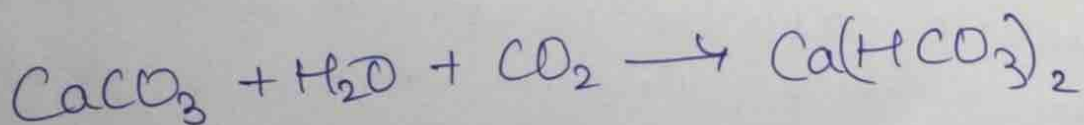

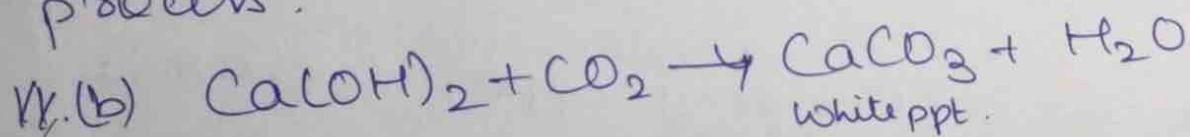

Two uses are :

- ↳ used in fire extinguishers
- ↳ used to relieve acidity, used as antacids.

Section - D

This process is known as chlor-alkali process.

11. A - $\text{Pb(NO}_3)_2$ (lead nitrate)
B - NO_2 (nitrogen dioxide gas)
C - Oxygen (O_2)

The types of reactions taking place are decomposition and double displacement reaction.
