

Ans- Reflex action is an involuntary response of effectors to the stimulus and it helps us in protecting us from any sudden stimulus which may harm us and thus takes care of the survival of an organism.

(b)

NEPHRON

Ans-

Collecting duct

proximal convoluted tubule
Bowman's capsule

Ans- The events are:

i) Light energy is absorbed by chlorophyll, which breaks down water molecules into oxygen and hydrogen.

iii) Light energy is converted into chemical energy. The reduction of carbon dioxide leads to the formation of carbohydrates.

iii) Plant absorb carbon dioxide ~~from~~ from atmosphere through the stomata and then enter the photosynthetic cycle of Calvin.

Ques-12
Ans-

Arteries

Veins

They are vessels which carry blood away from body organs to heart. The blood is the body's waste.

The blood flows under pressure.

Values are absent

Values are present

Ans-

Salivary amylase

iii)

Ans- Gastric juice also have three constituents

ii) Mucus

iii) HCl

iii) Pepsin

iii)

Ans- Small intestine

iv)

Ans- Small intestine have numerous finger-like structure called villi.

iii)

villi increases the surface area for the absorption.

iii) It is richly supply with blood vessels which carry the absorbed food particles to each and every cell.

Ques-14

(a)

Salivary amylase

Mouth

Stomach

Both (1) and (2)

Intestine

Small intestine

By the enzyme called lipase, carbohydrates break down into fatty acid or glycerol. By the enzyme called trypsin, protein break down into amino acid.

Ans-10

Aerobic	It takes place in the presence of oxygen.	The end products are $CO_2 + H_2O$ + energy.	38 ATP is produced	It occurs in cytoplasm and mitochondria.	e.g. human lungs, e.g. yeast.
Anaerobic	It takes place in the absence of oxygen.	The end products are lactic acid / ethanol + energy.	2 ATP is produced	It occurs in cytoplasm.	

Ans-11

A Mammals and birds have very big body. So, they need high amount of energy for the function of their life process. Therefore, as to maintain their body temperature then oxygenated blood should be pumped with deoxygenated blood. So, double circulation of blood is very necessary in human beings.
