10. (2) Tape-Measuring Tape

2. (1) Butter Paper

3. (1) Rotational and Rectilinear

4. (1) ~~4~~ (1)5. 45° 6. ~~Rev~~ Revolution of earth around sun, A girl swinging on a swing.~~7. real and inverted~~

7. real and inverted image

8. They are the known quantity used in measurement is called unit.

9. A pace or a footstep because--

★ it's not-accurate.

★ its size differs from person to person

So, ★ On measuring, length will differ which will cause inaccuracy.

$$10. (i) \quad 1 \text{ mm} = 0.1 \text{ cm} \quad / \quad \frac{1}{10} \text{ cm}$$

$$52 \text{ mm} = \frac{52}{10} \text{ cm}$$

$$= 5.2 \text{ cm}$$

(ii) $1 \text{ cm} = 0.00001 \text{ km}$

$14 \text{ cm} = 0.00014 \text{ km}$

$\text{ms} = 0.00014 \text{ km}$

11. a) Laws of reflection

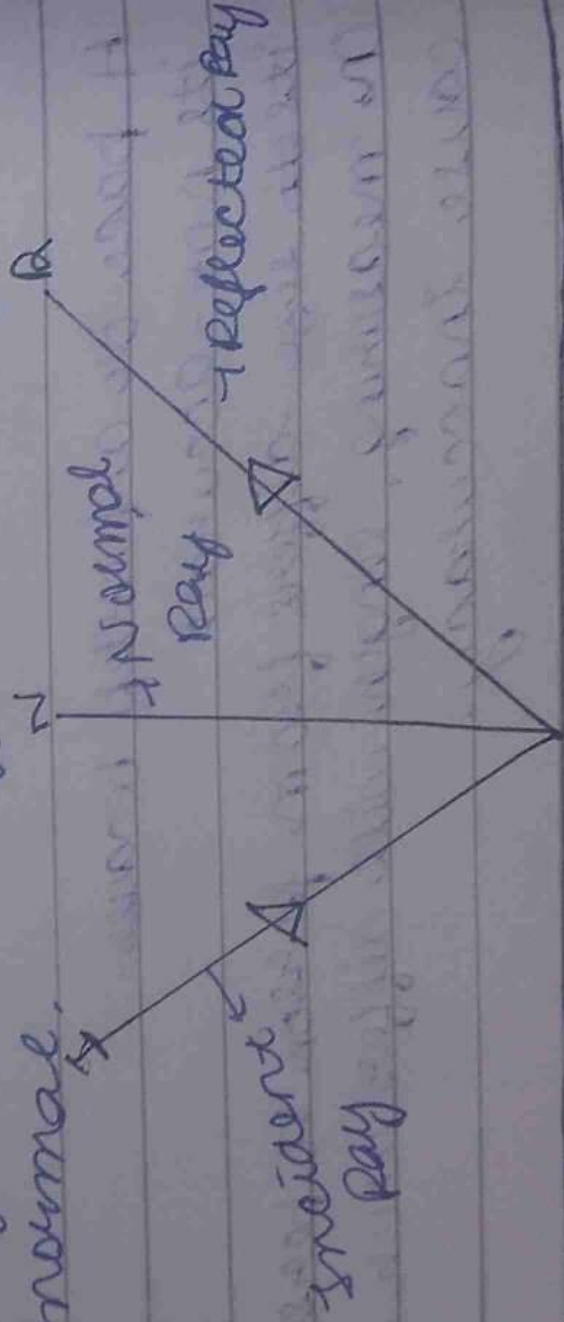

★ Angle of incidence = Angle of reflection

★ The incident ray, the reflected ray,

and the normal to the ~~reflected~~ ray,

all lie in the same plane.

★ The incident ray and the reflected ray are on different sides of the normal.

b) B, C, D, E, F, G - 6 letters

12. Any three motions:-

(1) Periodic Motion:- This is the motion in which the object keeps doing to and fro motion at fixed intervals. Ex:- a kid swinging on swing.

(2) Rotational Motion:- Motion of an object around its axis is rotational motion. Ex:- Rotation of Earth.

(3) Translational Motion:- Motion in which all parts move of the objects in the same direction without changing the orientation. Ex:- A car moving in a straight line.

13. Shadow is a dark area formed by an blocking the passage of light. Its characteristics are:-

- ★ Always dark, whatever the object's color is.
- ★ It is always formed on a screen
- ★ It is always erect
- ★ Formed on the opposite side of the light source
- ★ They only show the shape (outline) of the objects but not any other details.
