

clearly without strain. In a normal eye, it is 25cm.

(Chemistry)

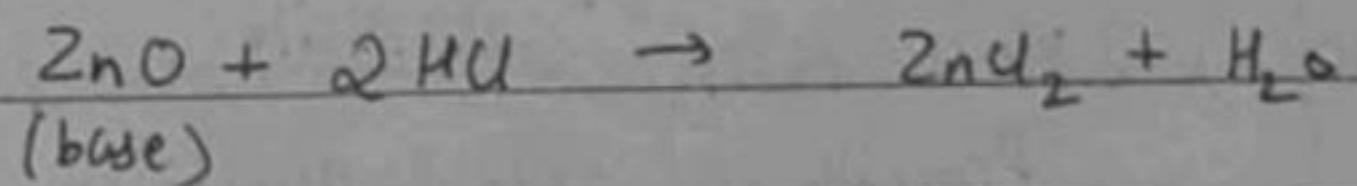

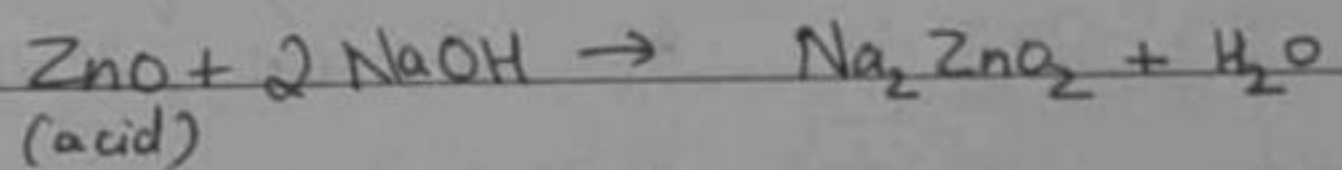

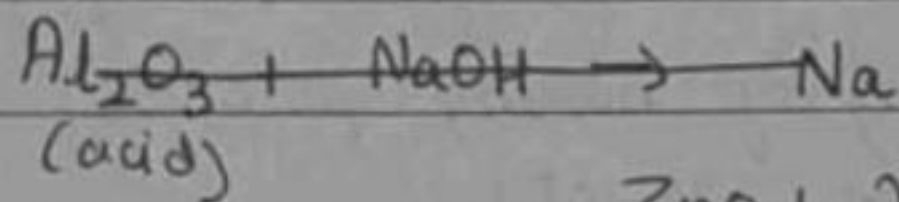

$\text{BaSO}_4$  is the insoluble substance formed and is white in color

Q3 1) A

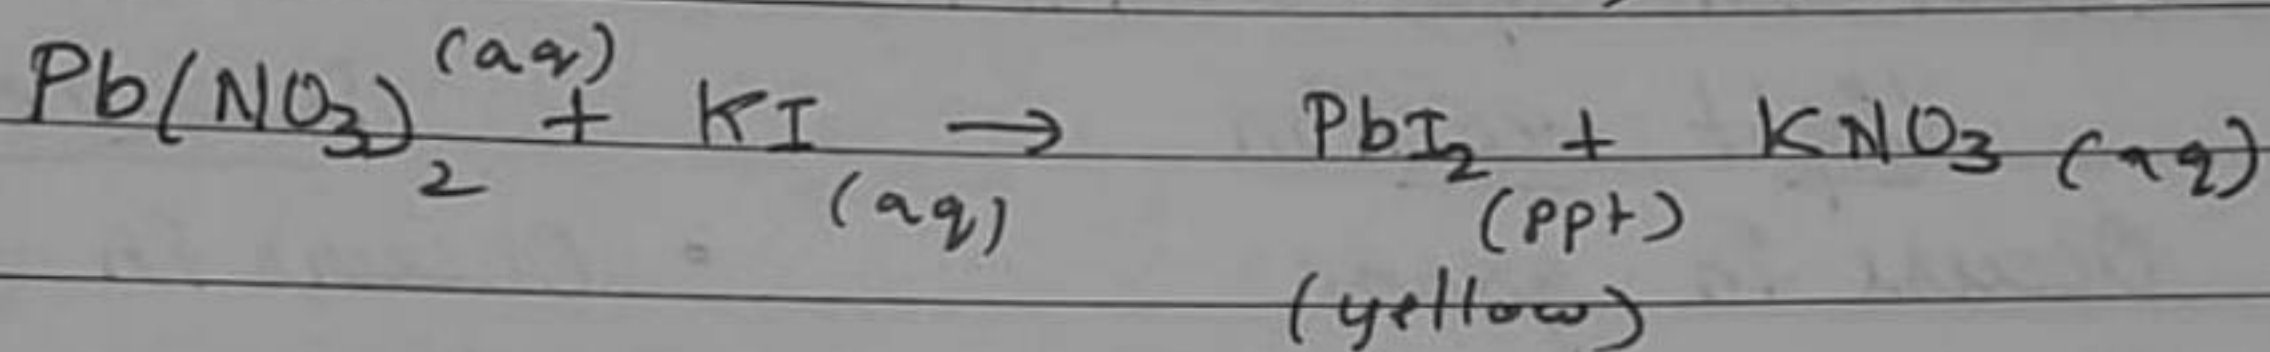

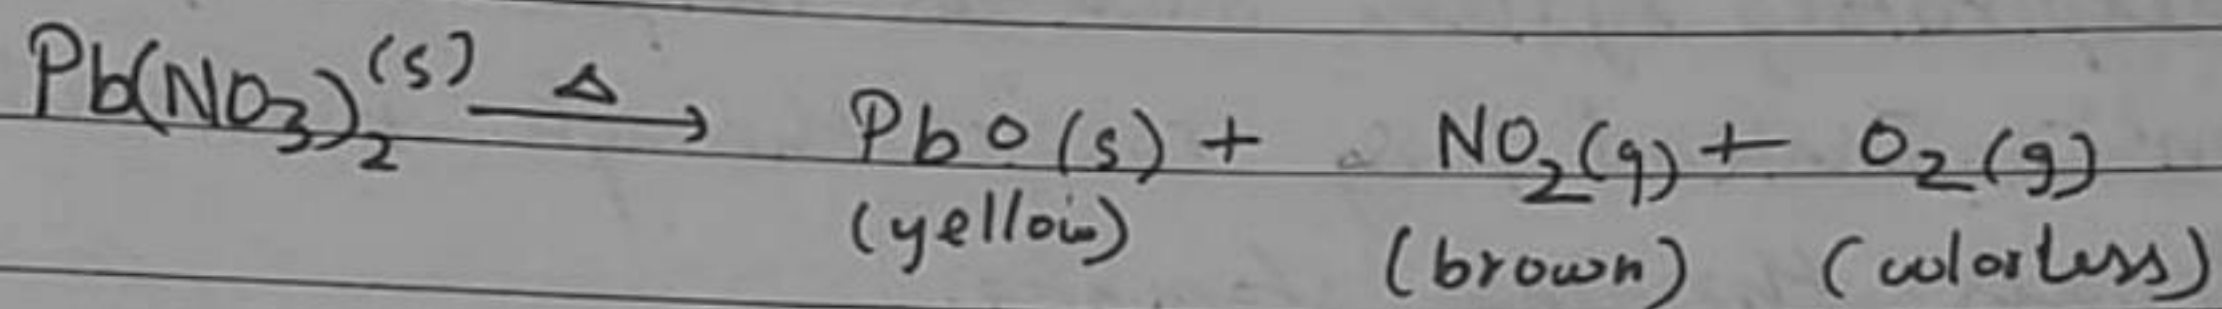

Q4 3) C

Q5 Amphoteric oxides are the oxides which can be used as an acid as well as a base. Eg -  $\text{Al}_2\text{O}_3$ ,  $\text{ZnO}$

When  $\text{CO}_2$  is passed through water, it turns milky due to the formation of calcium carbonate. When excess  $\text{CO}_2$  is added to it, calcium hydrogen carbonate is formed which is colorless.

Q11

Reactions involved are  $\rightarrow$  Decomposition and  
Displacement
