

gas and Zinc chloride

(b) Crushed egg shells.

In this process / reaction, dilute HCl reacts with crushed eggshells that are made of Calcium Carbonate. Hence, making the shells softer.

9. The pH of a salt used to make crispy pakoras is 14. The salt type is Baking Soda i.e., Sodium bicarbonate (NaHCO_3).

The uses of Baking Soda are:-

- * It is used as an Antacid as it has the properties to reduce Acidity in the Stomach.
- * It also is used for cooking fried foods like Pakoras.

The process is called Chloro-Alkali.

In this process Hydrogen gas is evolved at Cathode & Chlorine gas is evolved at Anode.

When excess Carbon Dioxide is added, it reacts with CaCO_3 & H_2O to form Calcium bicarbonate & since it is soluble in water, it dissolves making the lime water colourless.

11.

	R	P
Ca	1	1
O	2	3
Si	1	1

$\therefore$ The balanced eqⁿ is $\text{CaO (s)} + \text{SiO}_2\text{(s)} \rightarrow \text{CaSiO}_3\text{(s)}$.

$\therefore$ The reaction observed here is Combination reaction.

	R	P
Ti	1	1
Cl	4	$2 \times 2 = 4$
Mg	$1 \times 2 = 2$	1

$\therefore \text{TiCl}_4\text{(l)} + 2\text{Mg(s)} \rightarrow \text{Ti(s)} + 2\text{MgCl}_2\text{(s)}$ is the eqⁿ.

$\therefore$ The reaction observed here is :- Double Displacement Reaction.

	R	P
H	$2 \times 2 = 4$	$2 \times 2 = 4$
O	2	3

$\therefore$ The reaction observed here is Decomposition Reaction.
