

## CHEMISTRY

Ans 1. Buckminster fullrene [C-60]

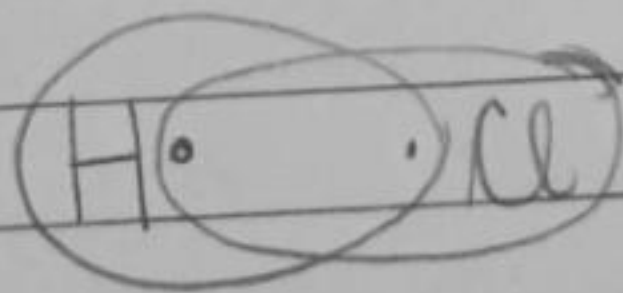

Ans 2. Covalent bond is a bond in which sharing of electrons takes place.

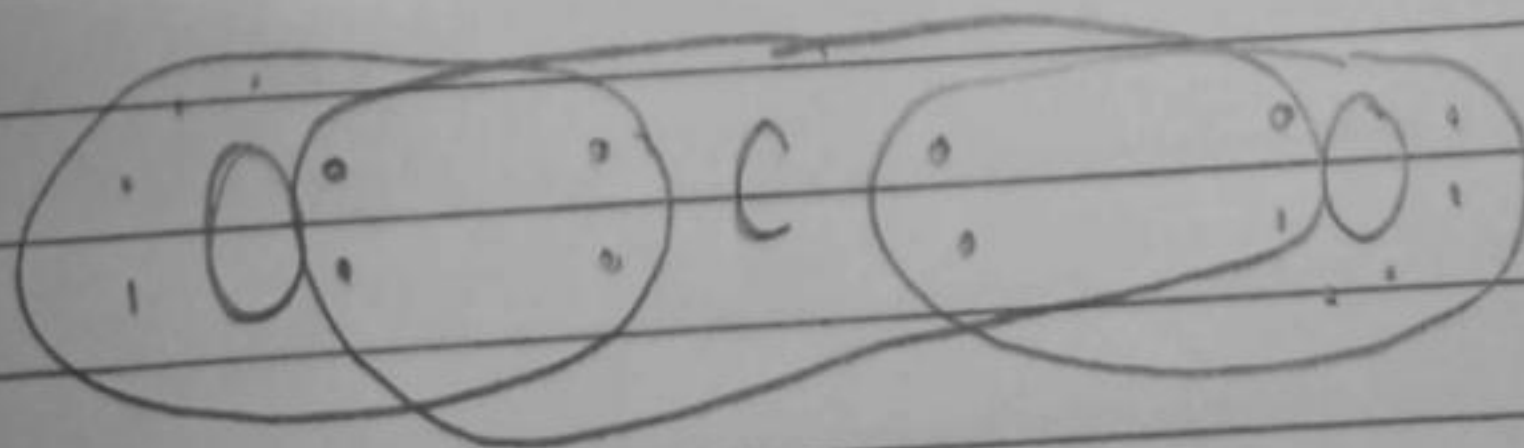

Carbon has 4 valence electrons. To make its octate complete, it would share each electron with 3 Hydrogen atoms and 1 Chlorine atom.

Ans 3. (1)  $\text{HCl}$

(2)  $\text{CO}_2$

(3)

KL4
