

Physics

Q1

→ The light beam will be real and inverted.

Q2

→ $f = \frac{R}{2}$ [Radius of curvature = 50]

$$f = \frac{50}{2} = 25$$

$$f = 25$$

Focal length = 25

It will be a convex mirror

Q3

Question with mark 08
for marking it is
[08]

$$\frac{v}{u} = m$$

$$2.5 = m$$

Physics

AQ4

$$h_2 \Rightarrow 2 \text{ cm}$$

$$P \Rightarrow 10 \text{ cm}$$

$$U \Rightarrow 15 \text{ cm}$$

$$\frac{1}{P} = \frac{1}{V} + \frac{1}{U}$$

$$\frac{1}{10} = \frac{1}{V} + \frac{1}{15}$$

$$\frac{1}{10} - \frac{1}{15} = \frac{1}{V}$$

$$\frac{3}{30} - \frac{2}{30} = \frac{1}{V}$$

$$\frac{1}{30} = \frac{1}{V}$$

$V = +30 \rightarrow [30 \text{ cm from the mirror is the position of image}]$

$$m = \frac{+V}{U}$$

$$m = \frac{30}{15} = 2$$

~~m~~ $\Rightarrow$ magnification ~~or size~~ $\Rightarrow 2$
size is ~~smaller~~ magnified because $m = 2$
and $[m > 1]$

~~Nature~~ $\Rightarrow$ Virtual
and erect.
