

clearly without strain. In a normal eye, it is 25cm.

(Chemistry)

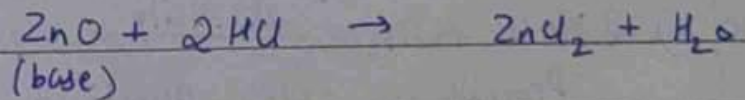

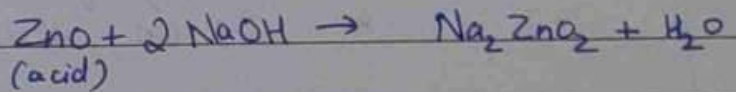

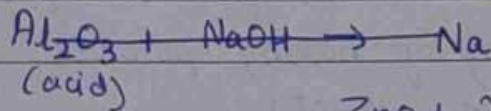

BaSO_4 is the insoluble substance formed and is white in color

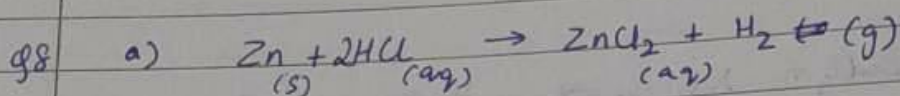

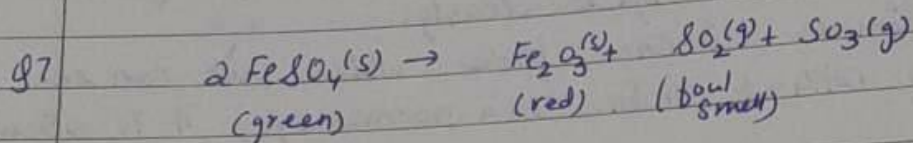

Q3 1) A

Q4 3) C

Q5 Amphoteric oxides are the oxides which can be used as an acid as well as a base. Eg - Al_2O_3 , ZnO

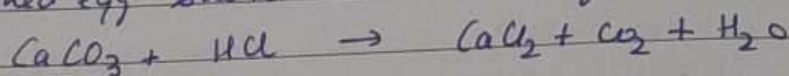

q6 In case of aluminium and zinc, double displacement can be observed, since Al and Zn are more reactive than Fe

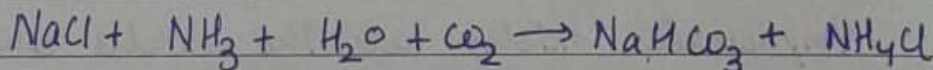

Since $[\text{Metals} + \text{Acid} \rightarrow \text{Salt} + \text{H}_2]$

b) Crushed egg shells are made of CaCO_3 .

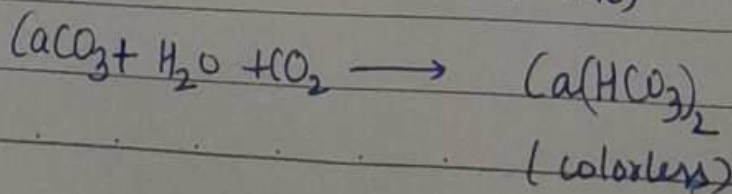

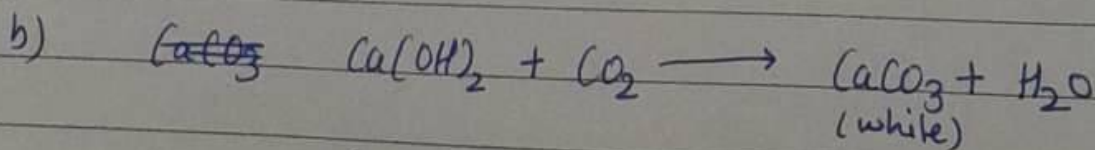

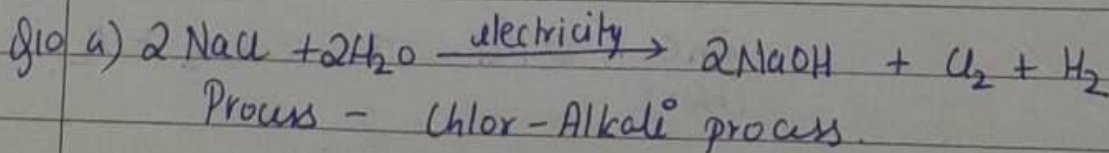

$[\text{Metal Carbonate} + \text{Acid} \rightarrow \text{Salt} + \text{CO}_2 + \text{H}_2\text{O}]$

q9 The salt used for making pakoras is baking soda (NaHCO_3)

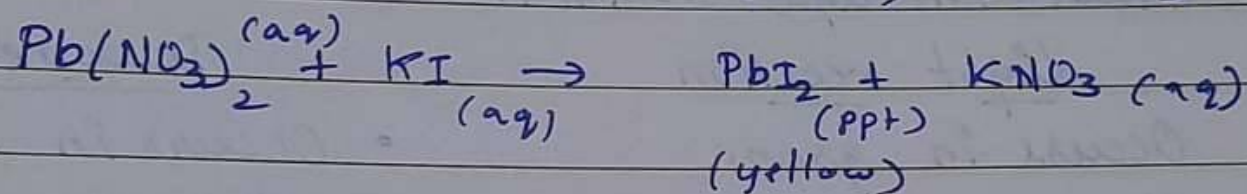

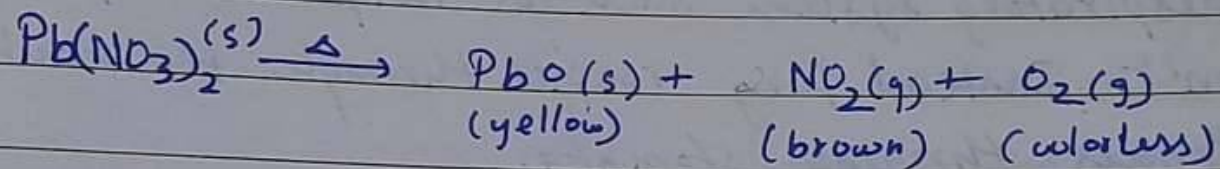

Uses →

- Used in soda fire extinguisher
- Making of baking powder
- As an antacid.

When CO_2 is passed through water, it turns milky due to the formation of calcium carbonate. When excess CO_2 is added to it, calcium hydrogen carbonate is formed which is colorless.

Q11

Reactions involved are $\rightarrow$ Decomposition and Displacement
