

SECTION - A

1. ④ Both (1) & (2)
2. ② Mitochondria only
3. ① RBC
4. ② Transpiration
5. ④ (1) & (2)
6. ④ None of these

SECTION - B

7. ~~Plants do not breathe, they respire through their leaves. And Animals breathe a~~

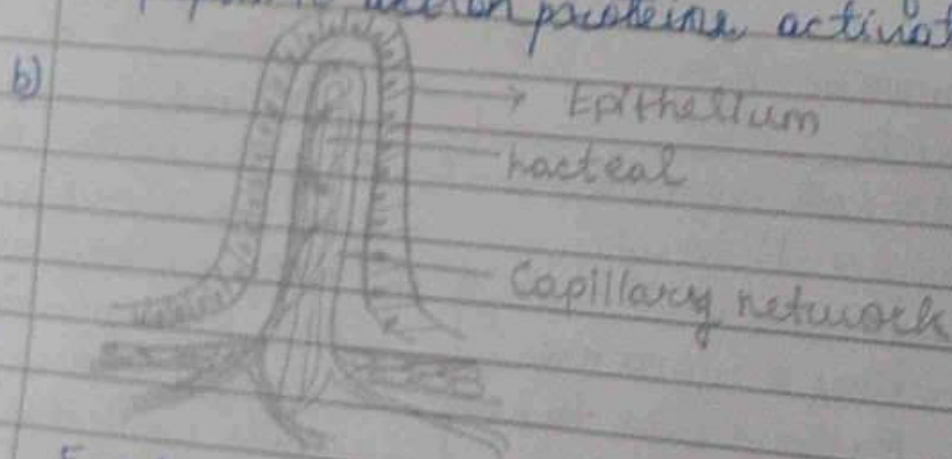

7. Respiration in plants	Respiration in animals
i) They do not breathe, they respire through their leaves.	i) They breathe air for respiration.
ii) Respiratory organs are absent. Respiration takes place through diffusion.	ii) Respiratory organs are present like lungs (in human), gills (in fishes) etc.

8. Light Reaction	Dark reaction.
i) It takes place in the grana part of the stroma chloroplast.	i) It takes place in the stroma part of the chloroplast.
ii) It is a photochemical phase.	ii) It is a biochemical phase.
iii) The end products are ATP and NAD NADPH.	iii) The end product is glucose.

9. a) The enzyme pepsin released by stomach and the enzyme trypsin released by pancreas acts on protein.
- b) If oxygen is not available, pyruvate undergoes reduction and produces lactic acid.

SECTION - C

10. a) Role of HCl Hydrochloric acid in stomach :-
- 1) It kills the germs in the stomach.
 - 2) It creates an acidic medium for enzyme pepsin to act on proteins and activate.

Function of lacteal - During the process of digestion, the lacteals absorb large molecules of fats and lipids from the small intestine.

11. a) Alveoli are covered with blood capillaries so that the exchange of gases takes place between the membrane of alveoli and the surrounding capillaries. The blood in capillaries covering alveoli has low oxygen and high CO_2 concentration. This allows O_2 to diffuse into the blood and CO_2 out of the blood.

10. b) Cartilaginous rings supports trachea and prevents it from collapsing. It also helps in the flexible movement of neck during breathing.

SECTION - D

12. a) During ~~the~~ the winter season, the surrounding temperature is very low. So there is less sweating, thus no evaporation losses. Due to reason, we pass more urine in winter.
- b) The ^{accessory} ~~necessary~~ excretory organs in humans are. The ~~urinary~~ ~~urinary~~ ~~urinary~~ urinary system (~~the~~ kidney, ureters, urinary bladder and urethra), skin, lungs and liver.
- c) Excretory organs of arthropods are ~~malp~~ malpighian tubules and green ~~gland~~ gland.
13. i) 4 - left atrium
5 - right atrium
- ii) ~~3~~ is superior vena cava. The superior vena cava brings the blood from the upper part of the body.
- ii) 3 and 6 are superior vena cava and inferior vena cava respectively. They bring the blood from the various part of the body to the heart.

BIOLOGY

3/9/23

DATE

--	--	--	--	--	--	--

- iii) Arteries carry blood away from the heart.
- iv) The circulation in human beings is a double circulation because the blood passes the four chambered heart two times.
